

Antwort

der Bundesregierung

**auf die Kleine Anfrage der Abgeordneten Dr. Gero Clemens Hocker, Frank Sitta, Carina Konrad, weiterer Abgeordneter und der Fraktion der FDP
– Drucksache 19/17325 –**

Messstellen und Parameter zur Bewertung des chemischen Grundwasserzustandes

1. Welchen EU-Code weisen die einzelnen deutschen Grundwasserkörper nach Auswertung der Bewirtschaftungspläne der Bundesländer durch das Umweltbundesamt auf, und in welchem Bundesland befinden sich diese jeweils (bitte tabellarisch auflisten)
2. Welche der deutschen Grundwasserkörper befinden sich in einem guten bzw. schlechten chemischen Zustand (bitte tabellarisch auflisten, gern zusammen mit der Antwort zu Frage 1)?
3. Wie viele Grundwassermessstellen befinden sich nach Auswertung der Bewirtschaftungspläne der Bundesländer durch das Umweltbundesamt in den einzelnen Grundwasserkörpern (bitte tabellarisch auflisten, gern zusammen mit der Antwort zu Frage 1)?
4. Wie lauten nach Auswertung der Bewirtschaftungspläne der Bundesländer durch das Umweltbundesamt die behördlichen Bezeichnungen für die in den Grundwasserkörpern befindlichen Messstellen, die der Berichterstattung gemäß Wasserhaushaltsgesetz bzw. Grundwasserverordnung dienen, und wo genau befinden sich die Messstellen (bitte tabellarisch unter Angabe der geographischen Koordinaten und des zugehörigen Grundwasserkörpers auflisten)?

5. Welche Ursachen führten bei den einzelnen Grundwasserkörpern jeweils zu der Einstufung „schlechter chemischer Zustand“ (bitte als tabellarische Auflistung des Parameters bzw. der Parameter pro Grundwasserkörper, des geltenden Schwellenwertes und der Höhe der Schwellenwertüberschreitung und/oder der konkreten Angabe der sonstigen Gründe, die zur Einstufung „schlechter chemischer Zustand“ geführt haben)?

Die Fragen 1 bis 5 werden zusammen beantwortet.

Die erbetenen Informationen, soweit vorliegend, können den beigefügten Anlagen* entnommen werden.

Die Anlage 1 enthält die Angabe zum chemischen Zustand der Grundwasserkörper in Deutschland sowie die Angabe der jeweiligen EU-Codes und des Bundeslandes.

Die Anlage 2 enthält die geforderten Angaben zu den Messstellen.

Die Anlage 3 enthält die Information über die Parameter, durch die eine Zielverfehlung an den einzelnen Grundwasserkörpern erfolgte. Dabei ist zu beachten, dass darin alle Parameter aufgeführt sind, für die Überschreitungen festgestellt wurden, das heißt es gibt Mehrfachnennungen für diverse Grundwasserkörper. Die Bundesregierung hat keine Kenntnisse darüber, wie hoch die Schwellenwertüberschreitung der einzelnen Stoffe ist. In der Grundwasserverordnung sind die Schwellenwerte in Anlage 2 der Verordnung geregelt. Alle Ergebnisse basieren auf dem Wasserrahmenrichtlinien (WRRL)-Meilensteindatenbestand 2017 der Bundesanstalt für Gewässerkunde.

6. Welche zeitlichen, räumlichen oder methodischen Aggregationen der Überwachungsergebnisse kamen in den einzelnen Grundwasserkörpern nach Auswertung der Bewirtschaftungspläne der Bundesländer durch das Umweltbundesamt jeweils zur Anwendung (bitte tabellarisch auflisten)?

Die Bewertung der Grundwasserkörper wurde von den zuständigen Behörden der Bundesländer vorgenommen. Das Umweltbundesamt hat bei der Auswertung der Bewirtschaftungspläne auf die von den Ländern berichteten Bewertungsergebnisse zurückgegriffen. Eigene Aggregationen von Überwachungsergebnissen hat das Umweltbundesamt nicht vorgenommen.

* Von einer Drucklegung der Anlagen wird abgesehen. Diese sind auf Bundestagsdrucksache 19/17763 auf der Internetseite des Deutschen Bundestages abrufbar.

Anlage 1 zur Antwort der Bundesregierung auf die Kleine Anfrage 19/17325
